github.com/mytoandeptrai

Frontend Engineer with 4.5+ years of experience developing and maintaining web applications using React, Next.js, and TypeScript. Experienced in working directly with clients to analyze requirements, propose solutions, and support project delivery. Strong in frontend architecture, code quality, and collaboration with cross-functional teams, with hands-on experience in payment and blockchain-related systems.

WORK EXPERIENCE

FrontEnd (Developer, Leader)

Mar 2024 - Present

Var Meta

DaNang - VietNam

- Led **technical discussions with clients** to analyze business requirements and propose **high-level design solutions**, including component structure, state management approach, data flow, and integration patterns before implementation.
- Collaborated closely with **design and business stakeholders** to translate UX/UI and business needs into clear technical solutions.
- Executed sprint commitments in an **Agile/Scrum environment**, ensuring implementation aligned with agreed technical designs and priorities.
- Supported team members by **resolving technical issues**, reviewing implementations, and sharing best practices to maintain overall code quality.
- Mentored and coached junior frontend developers through **code reviews, architecture guidance, and best-practice sharing**.
- Established and enforced **coding standards and maintainability guidelines**, helping reduce long-term technical debt and improve overall code consistency.

Frontend Instructor

Jan 2024 - Dec 2024

VTI Academy

DaNang - VietNam

- Designed and delivered a structured frontend curriculum covering **HTML, CSS, JavaScript, TypeScript, React, and Next.js**, with a strong emphasis on real-world development workflows and best practices.
- Guided students through **hands-on projects**, including component design, state management, and basic performance considerations, helping them build practical and maintainable frontend applications.
- Assessed student progress and learning outcomes, supporting career readiness and contributing to **high overall course satisfaction (~85%)**.

Software Engineer (Developer, Sub Leader)

Jan 2022 - Mar 2024

Hitachi Digital Services

DaNang - VietNam

- Worked closely with clients and internal teams to **analyze requirements**, clarify business logic, and translate them into clear technical tasks for the development team.
- Worked on projects following a **Waterfall development process**, ensuring implementation aligned with specifications and quality standards.
- Took ownership of **task breakdown and estimation** using Redmine/Jira, helping the team maintain stable delivery and predictable progress.
- Acted as a **sub-leader for a small team**, assigning tasks, reviewing deliverables, and ensuring work met project and client expectations.

SKILLS

Front End Tech Stacks: Vite, React, Next.js, TypeScript, TailwindCSS, Redux, Zustand, TanStack Query, Shadcn, Material UI

Back End Tech Stacks: NodeJS, Express, Restful-API, NestJS, Docker

AWS: EC2, S3, SNS

Database : MongoDB, Postgresql, MySQL (basic), Redis (basic).

Others: Nginx, Cloudinary, SocketIO, Mqtt, Jest, Wagmi, Ethers, Webpack ...

Tools: SVN, Git, Jira, GitLab CICD, JetBrains, Redmine.

LANGUAGES

English (Professional working proficiency)

AWARDS

Third Prize – Internal Company Hackathon (2025)

PROJECTS

PWC Payment System

Dec 2025 - Feb 2026

- Led the project team end-to-end, working directly with customers to gather requirements, clarify business needs, and propose technical solutions before implementation.
- Established the initial frontend codebase using Vite.js and TypeScript, defining technical standards and guiding implementation across the team.
- Contributed to product and UX design by creating wireframes in Figma, validating ideas with customers before UI development.
- Collaborated with frontend and backend engineers to design high-level payment flows, including sequence diagrams for order creation, integration with the client's payment core, and webhook-based callbacks for payment status updates.
- Supported backend development using Golang by fixing bugs and resolving implementation issues, without owning backend architecture.
- Built SDKs and generated API documentation using Fern to reduce manual library development and improve integration efficiency.
- Worked with blockchain networks such as BSC and Tron in the context of payment and transaction-related workflows.

PQA - PQUSD Stable coin

Apr 2025 - Feb 2026

- Led frontend development and worked directly with clients to gather requirements, analyze business needs, and prepare effort estimations before implementation.
- Proposed frontend and system-level solutions for new features and technical issues, collaborating with the team and providing solution suggestions to clients when needed.
- Contributed to backend development by fixing bugs and maintaining existing features, without owning overall backend architecture or leadership.
- Implemented Single Sign-On (SSO) across frontend and backend, enabling user to authenticate once and access multiple system components seamlessly.
- Implemented a custom, rule-based rate limiting mechanism on the backend, allowing flexible configuration without relying on third-party libraries.
- Worked with multiple blockchain networks, including Ethereum, Arbitrum, Tron, Abelian, and Qday, covering both EVM and non-EVM environments.
- Gained hands-on experience with multisignature workflows across smart contracts and frontend flows, requiring multiple wallet approvals for critical actions.
- Integrated KYC verification using Sumsb and worked with Kafka-based systems, leveraging existing service foundations to support event-driven workflows.
- Worked with cloud services including AWS (SES, S3, Cloudfront) and set up deployment environments on Huawei Cloud for the project.

NFT Minting DApp

Mar 2025 - May 2025

- Deployed ERC-1155 smart contract to the Avalanche blockchain using Thirdweb CLI & dashboard.
- Integrated Thirdweb SDK to support wallet connection, contract interaction, and NFT minting workflows on the frontend.
- Developed a responsive minting interface using React, Shadcn-UI, and Tailwind CSS, ensuring consistent user experience across mobile and desktop devices.
- Set up Google Analytics to track user behavior and engagement on the minting site, enabling data-driven improvements to the user flow.
- Configured Nginx, Docker, and a GitLab-based CI/CD pipeline to automate deployment to AWS EC2 production environments.
- Handled blockchain-related concerns including wallet setup, gas estimation, transaction signing, and debugging on-chain interactions.

KLDX - A Stock Exchange Platform

Apr 2024 - Feb 2025

- Established and maintained a source-based micro-frontend architecture using React, Webpack 5, and TypeScript, enabling smooth integration with legacy systems.
- Defined frontend technical standards and reviewed implementations to ensure consistency, scalability, and maintainability across team deliverables.
- Led the development and integration of complex frontend features, including advanced TradingView chart customization and a real-time order book using MQTT.
- Improved frontend performance and stability by proposing architectural and tooling enhancements such as web workers and caching strategies.
- Collaborated with backend teams to integrate APIs and contributed to improving frontend security practices and data-handling reliability.
- Worked closely with senior developers and UI/UX designers to refine UI/UX implementations and ensure alignment with product and technical goals.

Bit-kub E-Learning Platform

Mar 2024 - Jun 2024

- Worked directly with BA to clarify requirements, design implementation approaches, and break them down into estimable tasks for team members.
- Established the initial codebase and project structure for an admin platform built with Next.js to manage course-related data.
- Participated in full-stack development by supporting and reviewing the implementation of multiple core features.
- Reviewed and proposed appropriate software tools and libraries to improve development workflow and maintainability.
- Collaborated with team members to troubleshoot issues, review code, and provide technical guidance during development.
- Implemented a GitLab-based CI/CD pipeline to automate deployment to AWS EC2 production environments.
- Worked with AWS services such as S3 for file storage and SNS for notification and email-related workflows.

Multi Service Platform - Image Analysis (MSPF - IVA)

Mar 2023 - Feb 2024

- Met directly with customers (with BrSE support) to receive assignments, clarify requirements, and report implementation progress.
- Supported feature assignment for team members, reviewed implementations, and provided technical support when needed.
- Supported deployment workflows by delivering source code to customers using Docker.

- Developed UI/UX and complex logic features such as Excel export, dynamic forms, and multi-chart visualization using React and Next.js.
- Wrote unit tests for backend modules using Jest and supported automation testing using Selenium (Python).

Multi Service Platform - Video Multi Service (MSPF - VMS)

Jan 2022 - May 2023

- Reviewed client design documents, clarified requirements, and broke them down into manageable tasks to support estimation and implementation planning.
- Developed UI and complex logic features, including HLS video playback, custom API retry handling (without third-party libraries), execution time calculation for multiple videos with variable playback speeds, and long-running API execution.
- Maintained legacy screens and fixed bugs to improve overall user experience and system stability.

EDUCATION

Bachelor of Information Technology

Aug 2018 - Jul 2023

University of Science and Education - The University of Da Nang

- Major: Information Technology
- Degree classification: Good
